What is claimed is:

- A method for the systematic multi-tiered treatment of heart disease by delivery of therapeutic growth factor proteins comprising the steps of:
 - a.) selecting a patient displaying symptoms of heart disease;
 - b.) administering at least one dose of an effective amount of a first therapeutic growth factor protein formulation by oral inhalation;
 - c.) monitoring levels of CPK-MB in the patient;
 - d.) determining whether administration of the growth factor protein formulation was effective in treating the symptoms of heart disease in the patient;
 - e.) administering one or more additional doses of a second growth factor protein formulation by a method of delivery more invasive than delivery by oral inhalation; and
 - f.) repeating steps c.) through e.) until there is a clinical indication of amelioration of the symptoms of heart disease in the patient, or until there is a contraindication to continued treatment.
- The method of claim 1, wherein the protein formulation comprises a growth factor protein selected from the group consisting of FGF-1, FGF-2, VEGF, and mixtures thereof.
- The method of claim 1 wherein the symptoms of heart disease are acute.
- 4. The method of claim 3 wherein the acute symptoms of heart disease are brought on by a condition selected from the group consisting of myocardial infarct, unstable angina, an acute anginal attack, and reperfusion injury.

- 11. The method of claim 10, wherein the protein formulation comprises a growth factor protein selected from the group consisting of FGF-1, FGF-2, VEGF, and mixtures thereof.
- 12. The method of claim 10 wherein the heart disease is characterized by acute symptoms.
- 13. The method of claim 12 wherein the acute symptoms of heart disease are brought on by a condition selected from the group consisting of myocardial infarct, unstable angina, an acute anginal attack, and reperfusion injury.
- 14. The method of claim 13, wherein the reperfusion injury is induced by a procedure selected from the group consisting of thrombolytic therapy, bypass surgery and angioplasty.
- 15. The method of claim 10 wherein the heart disease is characterized by symptoms that are chronic.
